MAY 2025

ACKNOWLEDGMENT

This project, titled “*Lupong Tagapamayapa Criminal and Civil Cases Records Management System*”, would not have been possible without the support and guidance of many individuals and institutions.

We sincerely thank **Adamson University** for providing the overall support and resources needed to complete this Academic Service Learning project. Their commitment to community engagement empowered us to create something meaningful beyond the classroom. We also express our gratitude to the **Computer Science Department** for implementing the ASL program which allowed us to apply our technical skills in a real-world setting.

Our heartfelt appreciation goes to the **officials of Barangay Molino III**, especially **Kapitan Apolonio I. Advincula**, for welcoming us and recognizing the importance of this project in supporting the barangay’s justice system. Special thanks to **Barangay Secretary Kim B. Cortez** for his active coordination, data provision and engagement throughout the development process.

We are also deeply grateful to our ASL Adviser, **Mr. Jay Abaleta**, for his valuable guidance, feedback and encouragement from start to finish. His constructive feedback pushed us to refine our work and focus on creating a system that is not only functional but also secure, sustainable and responsive to the needs of the barangay.

To our **team members and fellow students**, thank you for your dedication and teamwork. This journey reminded us that service, when driven by knowledge and purpose, creates meaningful and lasting impact.

CHAPTER 1: INTRODUCTION

1.1 BACKGROUND OF THE STUDY

Barangays play a vital role in local governance especially when it comes to keeping the peace and order in their communities. Under Republic Act 7160, also known as the 1991 Local Government Code, they're responsible for handling criminal and civil cases, as well as settling family and community disputes through the Barangay Justice System or Katarungang Pambarangay. To make this possible, the Lupong Tagapamayapa, an administrative body in every barangay, is in charge of organizing, recording and securing case records, which ensures every dispute is properly addressed. But for this to operate smoothly, a reliable record-keeping system is necessary to ensure all case details are documented correctly since these records are submitted to concerned agencies.

Currently, Barangay Molino III still relies on hard copies, logbooks and a simple database to keep track of criminal and civil cases details, settlement proceedings and compliance status. While this setup functions sufficiently, it comes with a lot of challenges like time-consuming record searches which slows down the process of verifying and tracking status and important details involved in cases. These inefficiencies highlight the need for an improved system that not only organizes records properly but also makes them easier to access and manage.

To solve these difficulties, this study suggests developing an improved Lupong Tagapamayapa Case Records Management System. With a more organized and secure database, managing case records will be smoother and more efficient. By modernizing the system, Barangay Molino III can provide more organized and proper handling of disputes filed that gives more effective responses to the community. In the long run, this system will help the Lupong Tagapamayapa operate better, keeping the community peaceful, organized, and well-managed.

1.1.1. THE HISTORY OF BARANGAY MOLINO III

Barangay Molino III is one of the 73 barangays in the city of Bacoor, Cavite, Philippines. The name "Molino" means "mill" in Spanish, reflecting the area's historical ties to milling operations. It is connected to the construction of Prinsang Molino, also known as Molino Dam, located in Barangay Molino 3 and was built by the Spaniards in the 19th century. It is supplied by two river systems that channel water from both the eastern and western sections of the southern watershed.

During its early establishment, the barangay was led by Kapitan David Camantigue, who helped organize and develop the community. Under his leadership, the barangay was divided into seven different barangays, with Molino III remaining a distinct and important part of the local governance system. Today, Barangay Molino III has a span of approximately 950 hectares and has a population of about 89,400 residents. It consists of around 50 subdivisions and almost 16 urban associations.

The development of the barangay started way back in the 1990's and until now, the barangay is progressive and continues to grow, improving its roads, public services, facilities for the people, and adaptability to change.

Patronal Fiesta/Foundation Day

October 5 - Karakol Festival

Geographical Location:

Barangay Molino III is located within the city and is bordered by the following barangays:

North	Molino II, Bacoor, Cavite
South	Molino IV, Bacoor, Cavite

East Molino V, Bacoar, Cavite
West Queens Row West , Bacoar, Cavite

1.1.2 MISSION & VISION

Mission

- *Magampanan at mapaglingkuran ng maayos ang mga tungkulin.*
- *Makapagbigay ng wastong kaalaman ukol sa kalusugan at edukasyon.*
- *Mapaunlad ang turismo at magkaroon ng karagdagang mapagkaka-kitaan.*
- *Mapaunlad ang transportasyon upang maibsan ang trapiko sa daang national at maiwasan ang mga panganib o aksidente ng mga mamamayan.*
- *Mapanatili ang kaayusan at katahimikan sa ikauunlad ng aming pamayanan.*

Vision

Ang Barangay ay makapaglingkod ng tama at maayos, upang maabot ang antas ng tamang pamumuhay sa pamamagitan ng pagkakaisa ng mamamayan. Malinis na kapaligiran, ligtas at tahimik na lugar at higit sa lahat maka-Diyos.

1.2. ORGANIZATIONAL STRUCTURE

1.3. STATEMENT OF THE PROBLEM

Barangay Molino III currently relies on a logbook and a basic database to manage filed case records. One of their main difficulties is the need to improve the system's search function, allowing barangay officials to efficiently retrieve criminal or civil case records with a single click. The following are the limitations of relying solely on a logbook and a basic database for managing civil and criminal cases:

- **Operational Efficiency**– When relying on both a logbook and a basic database in cases, it slows down retrieval and verification which reduce efficiency in barangay operations.
- **Data Organization** –The current system does not follow a structured method for storing and managing criminal and civil records, which makes them prone to errors, inconsistencies, and difficult retrieval.
- **Data Security** – Weak security measures leave sensitive records vulnerable to unauthorized access, loss, or tampering.

To address this issue, Barangay Molino III needs a more effective and secure Lupong Tagapamayapa Record Case Management System. A centralized digital platform that will increase the security, accessibility, and organization of data to support the proper handling of cases filed and enhance the delivery of services to the community.

1.4. OBJECTIVES OF THE STUDY

The primary objective of this study is to develop a web-based Lupong Tagapamayapa Case Record Management System for Barangay Molino III to efficiently manage case details, settlement processes, and compliance status. This system aims to enhance efficiency, security, and accessibility in handling case records, utilizing MySQL for reliable data storage and management. Specifically, this study aims to:

- To implement a secure role-based login system to ensure that only authorized personnel can access and manage case records.
- To develop a data entry module with validation checks to minimize errors in recording case details.
- To implement a search feature that allows barangay officials or lupon members to quickly locate criminal and civil case records.
- To enable retrieval of case records for systematic tracking from filing to resolution.
- To generate data visualizations that display case statuses of individuals, as well as monthly and annual reports.

1.5 SCOPE AND LIMITATIONS

This study focuses on the development of Lupong Tagapamayapa Record Case Management System, which addresses the objectives of the study by focusing on specific areas outlined in the scope. However, the system has certain limitations.

SCOPE

- Facilitate the recording of criminal and civil cases by enabling efficient searching, storing, and retrieval of case records managed by Lupong Tagapamayapa.
- Implement a role-based login system to ensure that only authorized barangay personnel can securely access and manage records.
- Generate a dashboard to visualize monthly and annual reports and case status.

LIMITATIONS

- The system is designed exclusively for desktop computers.
- The database is locally based so it will only be accessible on the computer located in the Hall of Justice of Barangay Molino III.
- The system is limited to handling criminal and civil cases.
- The system is designed based on the barangay's specific needs, as identified during the data gathering interview.

CHAPTER 2: DATABASE & PROGRAM STRUCTURE

2.2 ENTITY RELATIONSHIP NOTATION

2.3. ENTITY RELATIONSHIP DIAGRAM

2.4 USER INTERFACE

The login interface features a dark-themed left panel with the system title "CRIMINAL & CIVIL CASES RECORDS MANAGEMENT SYSTEM" and a small circular logo at the bottom. The right panel is white and contains a user icon, the text "Authorization Required", and input fields for "USERNAME" and "PASSWORD". Below these fields is a "Forgot Password?" link and a blue "ENTER" button.

The screenshot shows the 'Settings' page of the LUPON system. A modal titled 'Add New Account' is open in the center. The modal contains the following fields and controls:

- Title:** Add New Account
- Username:** Text input field
- Email:** Text input field
- Password:** Text input field
- Account Type:** Dropdown menu with 'Lupon' selected
- Action:** Add Account (button)

The background shows the 'Settings' page with a sidebar containing 'Dashboard', 'Users', 'Accounts', 'Admins', 'Logs', and 'Settings'. The main content area includes sections for 'Data' (Backup Data), 'Account' (Manage Account), 'System Logs' (Logging Settings), and 'Reporting'.

The screenshot shows the 'Settings' page of the LUPON system. A modal titled 'Deactivate Account' is open in the center. The modal contains the following fields and controls:

- Title:** Deactivate Account
- Username:** Text input field
- Password:** Text input field
- Action:** Deactivate (button)

The background shows the 'Settings' page with a sidebar containing 'Dashboard', 'Users', 'Accounts', 'Admins', 'Logs', and 'Settings'. The main content area includes sections for 'Data' (Backup Data), 'Account' (Manage Account), 'System Logs' (Logging Settings), and 'Reporting'.

The screenshot shows the LUPON system interface. On the left is a sidebar with navigation links: Dashboard, Cases, Reports, Archive, Logs, and Settings. The main content area is titled 'Settings' and contains sections for Data (Backup Data), Account (Manage Account), and System Logs (Logging Settings). A modal window titled 'Change Password' is open in the center. It contains the following fields: 'Account Type' (a dropdown menu currently showing 'Super Admin'), 'Username', 'Current Password', 'New Password', and 'Confirm New Password'. At the bottom of the modal is a 'Change Password' button.

The screenshot shows the LUPON system interface with the 'System Logging Settings' modal open. The modal has a title bar and a close button. Below the title, it shows 'Current Setting: Database Only'. The main section is titled 'Choose where to store system logs:' and contains three radio button options: 'File Storage Only' (with a description: 'Stores logs in text files. Simple but with limited search capabilities.'), 'Database Storage Only' (which is selected and has a description: 'Stores logs in the database. Better for searching and filtering logs.'), and 'Both File & Database Storage (Recommended)' (with a description: 'Maximum reliability with dual storage. Best for important systems.'). Below these options is a 'Note' section stating: 'Changes to logging settings will take effect immediately. You can view logs at any time by going to System Logs.' At the bottom of the modal is a 'Save Logging Settings' button.

CHAPTER 3: THE FORMS

3.1 ASL PLAN OF ACTIVITIES

ADAMSON UNIVERSITY ACADEMIC SERVICE LEARNING (ASL)

ASL ACTIVITY PLAN

Subject: Information Management

Topic: Record of Criminal and Civil Cases

Objectives: To develop a web-based system that can access and manage resident's criminal and civil cases records, all while providing analytics derived from the database.

Activities:

1. Project Planning / Preparation

- a. Signing of Letter of Understanding
- b. Signing of Letter of Intent
- c. Completion of Consent and Release forms for off-campus activity (Waivers)
- d. Completion of Activity Form
- e. Informal Interview

2. Data Gathering

Task: Conduct an interview with our community partner to identify challenges they face in managing data, and collect all requisite data needed for our software project and documentation.

- a. When was Barangay Molino III established?
- b. What led to its establishment?
- c. Could you provide a brief history of the barangay?
- d. What is the mission, vision, and goal of the barangay?
- e. What is the organizational structure of barangay Molino III?
- f. What key data does the barangay currently manage for criminal and civil cases records?
- g. What methods or systems are currently used to manage criminal and civil cases records?
- h. What challenges or limitations does the barangay face with the current methods of managing case data?
- i. What features or functionalities would the barangay like to see in a digital criminal and civil cases records management system?
- j. Can we request a list of all criminal and civil cases records?

3. Pre-development

- a. Design a high-fidelity prototype of the system in Canva to visualize the final product.
- b. Create a detailed flowchart to map out the entire process within the application.
 - c. Develop an Entity-Relationship Diagram (ERD) to visually represent the relationships between the data entities.

4. Development

- a. Develop front-end code using HTML5, Cascading Style Sheets, and JavaScript.
- b. Develop back-end code using PHP and JavaScript.
- c. Integrate front-end and back-end systems.

5. Testing

- a. Conduct bug testing to identify and fix defects in the software.

6. Deployment

- a. Launch the application into the barangay's system.
- b. Provide training sessions to the community partner to ensure effective use of the system.

3.2 COLLEGE DEAN REPORT

**ADAMSON UNIVERSITY
ACADEMIC SERVICE LEARNING PROGRAM**

3.4 FACULTY MEMBER EVALUATION FORM

ADAMSON UNIVERSITY ACADEMIC SERVICE LEARNING PROGRAM

Faculty Member Evaluation Form

Name : Jay A. Abaleta
Name of subject with ASL : Information Management College / Department : Computer Science
School Year : 2024-2025 Semester : 2nd Semester

1. Based in your student's journal and reports, what skills and benefits are your students receiving from their ASL projects?

The students were able to improve their industry logic, communication, critical thinking and problem solving and apply all of that in their program.

2. How does ASL improve the delivery of instruction in the course / subject?

The students were able to improve their industry logic, communication, critical thinking and problem solving and apply all of that in their program.

Thank you very much for your inputs, your suggestions / recommendations is much valuable for improving our program.

ADAMSON UNIVERSITY
ACADEMIC SERVICE-LEARNING PROGRAM

Faculty Member Evaluation Form

Semester: 2nd Semester

School Year: 2024-2025

Name of Professor: Jay A. Abaleta

Name of Community/Organization Served: Barangay Molino III, Bacoor, Cavite

Please rate the class in the following manner:

1=Poor, 2=Fair, 3=Good, 4=Very Good 5=Outstanding

1. Attendance / Punctuality	1	2	3	4	5
2. Dependability	1	2	3	4	5
3. Participation / Involvement	1	2	3	4	5
4. Skills / Quality of Work	1	2	3	4	5
5. Overall Performance	1	2	3	4	5

Question: How did the student's project help you and your community?

Answer: Their group project helped the community take one step closer to a progressive technological future. With their skills, they managed to come up with a system that will help the barangay manage criminal and civil cases records. With their help, Barangay Molino III continue to operate efficiently.

3.6 CLASS EVALUATION FORM

ADAMSON UNIVERSITY ACADEMIC SERVICE LEARNING PROGRAM

Class Evaluation Form

Subject: Information Management

Name of Professor: Jay A. Abaleta

College: College of Computing and Information Technologies **Department:** Computer Science

Name of Community / Organization Served: Barangay Molino III Bacoar, Cavite

The rating to be entered in the table is the average of the ratings given by the students and Interpreted as :

1=Strongly Disagree 2=Disagree 3= Neither Agree or Disagree 4=Agree 5=Strongly Agree

I.Preparation and Support

I received sufficient orientation about the community/organization I worked with	5
I received sufficient academic preparation to successfully complete my ASL project	5
I had opportunities to reflect on connection between course material and my ASL project	5
Question about the ASL project were effectively addressed	5
The ASL Teacher provided assistance when needed	5

II.Cognitive Learning

ASL project helped me learn materials covered in the course	5
ASL project helped me see real world application of course material	5
ASL project made it easier for me to think about the information we covered in class	5
I learned a lot from the class because of ASL project	5
It was easier to remember things we covered in class because of the ASL project	5

III.Affective Learning

Through my ASL project I made valuable contributions to the community agency / organization	5
I am concerned about local community issues	5
I intend to work in a career that will make a positive contribution to society.	5
I plan to help improve my neighborhood / community in the future	5

Over-all average Rating : 5

Interpretation : Strongly Agree

able to learn how to properly manage my time, how to communicate effectively with my groupmates when working professionally, how to manage the expectations of my client, and how to deliver news to them. I was able to learn new technologies in programming and was able to challenge myself to reach greater heights.

I intend to work in a career that will make a positive contribution to society.	1	2	3	4	5
I plan to help improve my neighborhood / community in the future	1	2	3	4	5

IV. Open-Ended Reflection

1. Discuss ways in which your ASL project enriched your college experience.

At first, the ASL project felt a bit overwhelming since it was something new and different from our usual schoolwork. But as we got deeper into it, I started to enjoy the experience. It helped me grow by pushing me to try things I wasn't used to, like working on a real system for an actual community. It was also exciting knowing that what we were building could really help someone. Overall, it made my college life more meaningful because I got to learn new skills, work with others, and see how what we do in school can have a real impact.

I received sufficient academic preparation to successfully complete my ASL project	1	2	3	4	5
I had opportunities to reflect on connection between course material and my ASL project	1	2	3	4	5
Question about the ASL project were effectively addressed	1	2	3	4	5
The ASL Teacher provided assistance when needed	1	2	3	4	5

II. Cognitive Learning

ASL project helped me learn materials covered in the course	1	2	3	4	5
ASL project helped me see real world application of course material	1	2	3	4	5
ASL project made it easier for me to think about the information we covered in class	1	2	3	4	5
I learned a lot from the class because of ASL project	1	2	3	4	5
It was easier to remember things we covered in class because of the ASL project	1	2	3	4	5

III. Affective Learning

Through my ASL project I made valuable contributions to the community agency / organization	1	2	3	4	5
I am concerned about local community issues	1	2	3	4	5
I intend to work in a career that will make a positive contribution to society.	1	2	3	4	5
I plan to help improve my neighborhood / community in the future	1	2	3	4	5

IV. Open-Ended Reflection

1. Discuss ways in which your ASL project enriched your college experience.

Participating in our ASL project, which involved developing a program for a barangay, greatly enriched my college experience. It pushed me out of my comfort zone and introduced me to new challenges I had never faced before. Through this project, I developed essential skills such as time management, professional communication with my group, and client interaction particularly in managing their expectations and keeping them updated on progress. Overall, this

IV. Open-Ended Reflection

1. Discuss ways in which your ASL project enriched your college experience.

Our ASL project made my college life more meaningful by giving me a chance to use what I learned in class to help a real community. I gained new skills like building a system and connecting it to a database, which will help me in the future. I also improved in working with others, solving problems, and managing my time. Most of all, it felt good to know that our project could really help Barangay Molino 3. It showed me that even as students, we can make a difference.

IV. Open-Ended Reflection

1. Discuss ways in which your ASL project enriched your college experience.

It was the first time I got to apply what I learned in class to something real. Building a system for the barangay showed me how technology can actually help a community. It felt good to know that our project could make things more organized and easier for the barangay officials. I also learned how to work better with people, both my group mates and the barangay staff. I had to listen, explain things in simple ways, and adjust based on their feedback. It taught me a lot about teamwork and communication. Most importantly, this project opened my eyes to how technology

CHAPTER 4: REFLECTION

Hans Jio Arca
202313994

For our Academic Service Learning (ASL) project, we created a system called Lupong Tagapamayapa: Criminal and Civil Cases Records Management System for Barangay Molino III in Imus, Cavite. This project helped us use what we learned in class to help a real community.

Before we made the system, the barangay kept their case records by hand or on paper. This was hard to manage, especially when they needed to find files quickly or keep everything organized. Our system helps by making it easier to add, view, search, and manage both criminal and civil cases using a computer.

While working on this project, we faced different challenges. We had to understand how the barangay works, what kind of records they handle, and how to make the system easy for them to use. Talking to the officials helped us design something that fits their needs. We also learned how important it is to make our system clear, simple, and safe.

This experience showed us how technology can help solve real problems in our own communities. We saw how our system can save time, reduce mistakes, and make it easier for the barangay to do their job. It felt good to know that our work can make a difference, even in a small way.

In the end, this project taught us more than just programming. It taught us teamwork, communication, and the importance of using our skills to serve others. We are proud of what we've done, and we hope the system will continue to help the barangay in the future.

Angel Laurence O. Germino
202311254

In our Academic Service Learning (ASL) project, we were tasked to reach out to a barangay or a non-government organization (NGO) that was facing a problem or challenge. Our goal was to create a system that could help address that issue. My group chose to work with Barangay Molino 3. After speaking with the staff, we discovered they were struggling to manage their records for criminal and civil cases. Most of their files were still handwritten or stored in Excel, which made it difficult to stay organized. To help solve this, we decided to develop a record management system for them.

When we started the project, I honestly felt overwhelmed. None of us had ever built a full system before, and everything from choosing the programming tools to designing the interface felt unfamiliar. On top of that, I got injured early on and couldn't go to the barangay for almost a month and a half. Since I wasn't from Molino 3, I sometimes felt like I couldn't help my group, and my resting time made me worry that I would fall behind.

But my group mates were very understanding. They kept me updated and gave me tasks I could do remotely, like coding and other responsibilities I could handle from home. Even though I couldn't be there physically, I still felt like part of the team.

We had to figure out a lot on our own by watching tutorials, reading guides, and asking for advice from professors. It wasn't easy, and there were plenty of frustrating moments, especially when bugs wouldn't go away or when deadlines were getting close. Still, we kept going. Little by little, the system started to come together.

Seeing the final result, something that could actually help Barangay Molino 3 manage their records better, was incredibly rewarding. It made all the effort, stress, and late nights feel worth it.

Looking back, this experience taught me more than just technical skills. I learned how to code and manage databases, but more importantly, I gained patience, adaptability,

and a deeper appreciation for teamwork. Being injured and unable to join my group in person was tough, but I found ways to stay involved and contribute.

What made the biggest difference was the patience and support of my groupmates. We helped each other through the difficult parts, and that reminded me that even when things do not go as planned, there is always a way to find solutions and make an impact.

ASL turned out to be more than just a school project. It became a meaningful experience that showed me how our knowledge can be used to help others, and how challenges can lead to personal growth.

Eitan Josef M. Goyal
202311492

Creating our ASL project system designed for a barangay was one of the most memorable and impactful experiences of my college life. At the beginning, I found it really difficult to get started. It was my first time working on a project of this scale and with real clients, and I felt overwhelmed and unsure of how to begin. But as time went by, it gradually became easier, especially because I wasn't doing it alone. Working as a group made all the difference. We supported each other, shared the workload, and learned together along the way.

Throughout the project, I was also able to learn valuable technical skills. I learned how to code in PHP and how to use SQL to manage and interact with databases skills that I know will be useful in my future career. Being able to apply what I learned in a real-world setting made the experience even more meaningful.

The project spanned several months, and during that time, we poured in so much effort, time, and energy to bring our vision to life. It wasn't just about coding or meeting deadlines; it became a meaningful journey of growth, teamwork, and discovery.

There were moments when we had to go to each other's houses and even stay overnight just to push through the workload. These long nights weren't easy, debugging issues was often frustrating and time-consuming, and sometimes it felt like we were solving one problem only for another to appear. But every time we finally fixed a tough bug, the sense of relief and accomplishment was so real that we couldn't help but celebrate, even in the smallest ways. It made us appreciate the process, not just the result.

Beyond the technical skills and the lessons in project management, what stood out the most was the bond I built with my groupmates. Spending so much time together facing pressure, solving problems, and sharing laughs helped us understand each other better and strengthened our connection. I truly couldn't ask for better groupmates. Their dedication, teamwork, and support made this journey not just successful, but genuinely enjoyable.

Overall, this ASL project wasn't just a requirement; it was a true learning experience that tested our skills, patience, and collaboration. It reminded me that hard work, when shared with passionate people, can lead to something truly fulfilling.

Renmar John P. Mabborang
202312202

In our Academic Service Learning (ASL) project, we were asked to reach out to a barangay or a non-government organization (NGO) that is facing a problem or challenge. Our goal was to create a system that could help them with that problem. My group decided to work with my own community, Barangay Molino 3. After talking to the staff there, we found out that they were having a hard time managing their records for criminal and civil cases. Most of their records were written on paper, and it was difficult for them to keep everything organized. That's why we decided to build a record management system for them.

At the start of the project, I really wasn't sure if I could help my group build the system. It was our first time making a complete system, so we didn't know how to begin. We were unsure which programming language to use and how to link the system with a database. Everything seemed unfamiliar and confusing. I even wondered if we could finish it on time or if the system would turn out the way we planned.

Because we didn't know much yet, we started learning on our own. We watched a lot of tutorial videos online, and looked for examples that could guide us. We also asked advice from our professors and people who had more experience in programming. Slowly, we started to learn how to do thing, how to create tables for the database, how to write code, and how to make the user interface simple and easy to use. Even though it was hard, we kept going and helped each other along the way.

Working with my groupmates made the experience better. We divided tasks, shared our ideas, and supported each other when we got stuck or felt tired. There were times when we stayed up late, especially when we were trying to fix bugs or finish parts of the system. But even with all the stress, I enjoyed the teamwork. It was fun to see how we improved little by little, and I felt proud of every small progress we made.

After several months of hard work, we were able to finish the system. It was a great feeling to finally see everything working. The system we made can now help Barangay Molino 3 record, store, and search for cases easily. It will save them time, reduce mistakes, and make their work more organized. Knowing that our project can really help the community made all our efforts worth it.

This experience taught me a lot. I learned new technical skills, like how to make a system and how to use a database. But more importantly, I learned about teamwork, problem-solving, patience, and the importance of helping others. I realized that even if something seems hard at the start, we can still succeed if we are willing to learn, ask for help, and work together. ASL was not just a school requirement, it was an experience that helped me grow. It showed me that the knowledge we learn in class can actually make a difference in the real world.

Floreine B. Santos
202311463

Throughout our academic service-learning experience, our group faced many challenges while working with each other and our client, but we pushed through, not just because we had to, but because we truly wanted to make this project a success.

My initial expectation was that this would be very difficult because we had to apply our knowledge and skills in the real world. I felt really nervous when our professor introduced this Academic Service Learning (ASL) project because I'm not very confident in coding. I've always found coding extremely difficult since high school, but I reminded myself that the purpose of studying is to learn. So, even though it was challenging, I had no choice but to study ahead and familiarize myself with the programming languages we would be using. I realized that it was a great way for students like me to learn more about ourselves.

Our project focused on criminal and civil cases. After gathering data, I didn't start developing the system right away because there were many legal terms that we, as students, didn't understand. We had to take the time to study and learn these terminologies. It was my first time seeing actual criminal and civil records, which made the experience very interesting for me. The barangay secretary was the only person we could contact, so it was challenging whenever we had questions since we had only one source of information, leading to miscommunication issues.

During the development of our system, I realized that I enjoy working on graphical user interfaces. I designed our UI in Canva within a week, while my groupmates helped with the frontend using HTML and CSS. I loved working with them because they never pressured me, not even once. In fact, I was the one pressuring them. We never had any arguments, which is why I never regretted having them as my groupmates. More importantly, I learned that working with a team requires understanding

and compromise. At first, I struggled to adjust to different personalities, but over time, I realized the importance of being considerate and adaptable. This experience taught me how to effectively collaborate with others, listen to their ideas, and find solutions that worked for everyone.

Aside from teamwork, I also improved my technical skills. Before this project, I had little experience with SQL and PHP, but as we progressed, I was able to learn how to use them and connect them to HTML. This was a huge achievement for me because, despite my initial struggles with coding, I proved to myself that I could learn and apply new programming languages. Studying ahead and practicing consistently helped me gain confidence in my abilities. This experience reinforced the idea that learning is a continuous process, and challenges can be overcome with determination and effort.

Beyond technical skills, I also developed better communication skills, which was a big step for me because I have social anxiety. At first, I found it difficult to interact with our client and even with my own groupmates. However, I gradually learned how to express my thoughts and ask for clarification when needed. One of the most important lessons I learned was the value of active listening. By paying attention to the needs of our client and the suggestions of my groupmates, I was able to contribute more effectively to the project. This also helped minimize misunderstandings and made collaboration much smoother.

Another significant realization I had was the importance of meeting client expectations. Unlike typical school projects where we only have to please our professor, this system was being developed for real use in the barangay. We had to consider not just what we thought was best, but also what our client actually needed. This meant making adjustments based on their feedback and ensuring that our work aligned with their requirements. It was a valuable lesson in responsibility and professionalism, which I know will be useful in my future career.

Overall, this academic service-learning experience was a journey of growth, both academically and personally. It challenged me to step out of my comfort zone, push past my fears, and develop skills that I never thought I could improve on. I learned that perseverance, teamwork, and adaptability are just as important as technical knowledge. No matter how difficult a project may seem at first, having the right mindset and a supportive team can make all the difference. This experience has not only prepared me for future projects but has also given me the confidence to take on even greater challenges ahead.

Jiro G. Yap
202311717

Creating the LT CCRMS was a significant milestone in my development journey, especially in backend programming using SQL and PHP. This project was not only a technical challenge but also an opportunity for growth, perseverance, and achievement. Looking back, I realize how much I have learned through the difficulties I faced, the rewards I gained, and the skills I developed not only technically but also in communication and teamwork.

One of the greatest challenges I encountered was designing and implementing the database structure to efficiently handle complex data. The system needed to manage various types of records, including cases and complaints, while ensuring the data remained consistent and secure. Writing SQL queries to retrieve and manipulate this data was initially difficult. I had to carefully study relational database principles and optimize my queries to avoid slow performance, which was especially important as the amount of data grew. Ensuring data integrity and preventing unauthorized access became priorities that required me to research best practices in database security.

On the PHP side, I faced challenges in writing clean, organized server-side code that could process user requests reliably. Managing user sessions, handling form data, and protecting against common security threats like SQL injection and cross-site scripting demanded a lot of attention to detail. Debugging issues in the backend was sometimes frustrating, particularly when problems involved multiple interconnected components, such as database operations combined with session management. Integrating the backend logic with the frontend interface also tested my ability to maintain smooth communication between the two, ensuring that user interactions were properly captured and processed.

Beyond the technical obstacles, one of the most valuable aspects of this project was how it taught me the importance of communication and teamwork. Developing a

system like LT CCRMS required collaboration with other team members, whether to clarify requirements, coordinate tasks, or review code. I learned that clear, open communication is essential to avoid misunderstandings and to keep everyone aligned on the project goals. Teamwork meant sharing ideas, asking for help when stuck, and offering assistance to others, which helped us solve problems more efficiently and produce a better product. This experience improved my interpersonal skills and showed me that successful projects are rarely the result of solo effort they thrive on collaboration and mutual support.

Through this project, I also discovered where my strengths truly lie. While I initially had a general interest in programming, working extensively on the backend made me realize that I fit well in backend development. I enjoy the logic, problem-solving, and structure required in database design and server-side programming. This realization has helped me focus my learning and career goals toward becoming a skilled backend developer.

Despite the challenges, completing the LT CCRMS and seeing it function as intended gave me immense satisfaction. The system's ability to help local officials manage and access records efficiently showed me the real-world impact of my work. It was gratifying to know that my coding efforts could facilitate better governance and service delivery at the community level. Beyond the project's practical value, the experience boosted my confidence in backend development and problem-solving.

Throughout the journey, I learned several important lessons. I discovered that a well-designed database is the foundation of a robust system; careful planning in schema design and query optimization is crucial. Writing modular and secure PHP code improves maintainability and protects the application from vulnerabilities. I also realized the importance of thorough testing and validation to ensure data integrity and a seamless user experience. Debugging taught me patience and the value of breaking down complex problems into smaller, manageable parts.

Most importantly, this project reinforced that challenges are opportunities for learning. The difficulties I faced pushed me to expand my technical knowledge and develop practical skills in SQL and PHP. The rewards were not just the functional system I built but also the personal and professional growth I gained along the way, especially in communication, teamwork, and understanding my fit in backend development.

In conclusion, creating the LT CCRMS was a demanding yet fulfilling experience that significantly shaped my abilities as a backend developer and as a team player. The journey taught me resilience, technical discipline, and the value of persistent learning and collaboration.
